* Advantage of longest job first (LJF)

- No other process can execute until the longest job or process ex

Q-1 FCFS with all process arriving at time 0 four processes P_1, P_2, P_3 & P_4 arrive at time 0 with burst time 8, 4, 6 & 3 ms respectively using non-preemptive Scheduling determine the execution order completion time waiting time TAT. Calculate WT & Avg TAT

Process	AT	BT	Com	TAT	WT
P_1	0	8	8	8	0
P_2	0	4	12	12	8
P_3	0	6	18	18	12
P_4	0	3	21	21	18

WT

$$AVG = \frac{0 + 8 + 12 + 18}{4}$$

$$= \frac{38}{4}$$

$$= 9.5$$

$$TAT = \frac{8 + 12 + 18 + 21}{4}$$

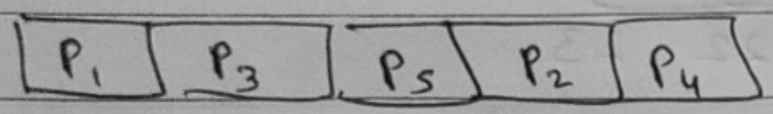

$$= 14.75$$

Q2 SJF with different arrival time
Consider the following process P.C

Process	AT	BT	Com	TAT	WT
P_1	0	7	7	7	0
P_2	2	4	8	6	2
P_3	4	1	10	6	5
P_4	5	4	14	9	5
P_5	6	2	18	12	10

$$\text{Avg TAT} = \frac{7+6+6+9+12}{5}$$

$$= \frac{40}{5}$$

$$= 8$$

$$\text{Avg wt} = \frac{0+2+5+5+10}{5}$$

$$= \frac{22}{5}$$

$$= 4.4$$

QB* FCFS

→

Process	AT	BT	Com	TAT	WT
P_1	0	~~5~~ 5	5	5	0
P_2	1	~~3~~ 3	8	7	4
P_3	2	8	16	14	6
P_4	4	2	18	14	12
P_5	6	4	22	16	12
P_6	7	1	23	16	15

$$\text{AUG TAT} = \frac{5+7+14+14+16+16}{6}$$

$$= \frac{72}{6}$$

$$= 12$$

$$\text{AUG WT} = \frac{0+4+6+12+12+15}{6}$$

$$= \frac{49}{6}$$

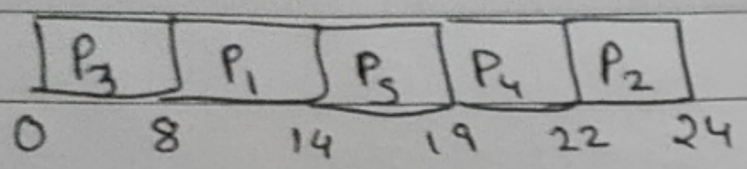

$$= 8.16$$

WF

Q4

Process	AT	BT	Com	TAT	WT
P_1	0	6	8	8	2
P_2	0	2	14	14	12
P_3	0	8	19	19	11
P_4	0	3	22	22	19
P_5	0	5	24	24	19

$$\text{Avg TAT} = \frac{8+14+19+22+24}{5}$$

$$= \frac{87}{5}$$

$$= 17.4$$

$$\text{Avg WT} = \frac{2+12+11+19+19}{5}$$

$$= \frac{63}{5}$$

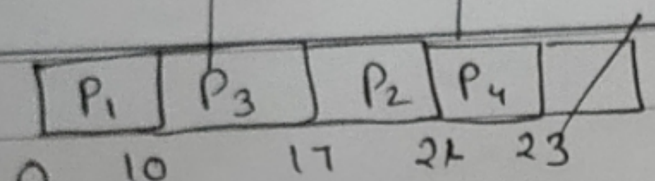

$$= 12.6$$
